SPG is a rear-projection screen paint that can be used on glass, acrylic and other transparent surfaces

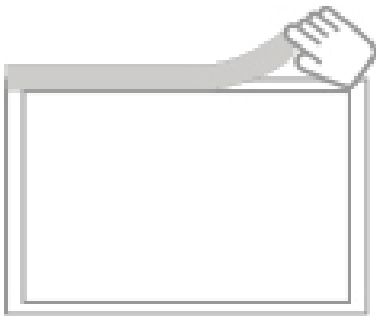

SPG (Screen Paint for Glass)

How to use

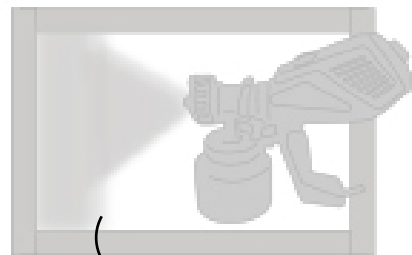

Rear projection screen paint

It can be applied to transparent substrates, such as glass, acrylic surfaces, etc. After applying the screen paint to the interior side of a transparent substrate, project an image from a beam projector to a painted side, you can see a clear image on the exterior side.

- 1 Attach the masking tape according to the designed screen size

Back side

- 2 After applying paint twice and wait until the paint dries, after that remove the masking tapes

Application case

Busan Start-up Incubator

Installation of transparent kiosk (with. SPG) and development of digital guestbook

[Click on the picture to see video](#)

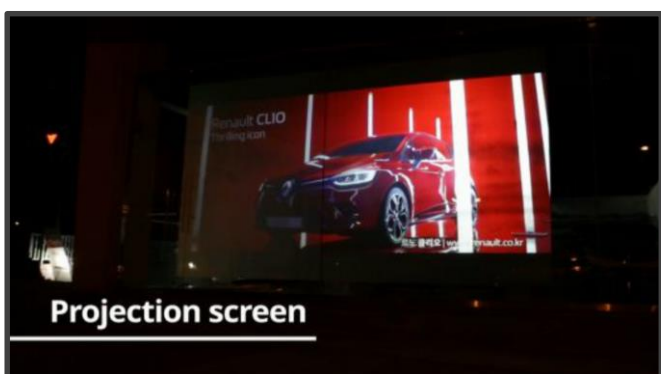

National Statistical Office contest

Installation of a digital transparent banner

SK Telecom Premium Store

Renault Korea Motors Showroom

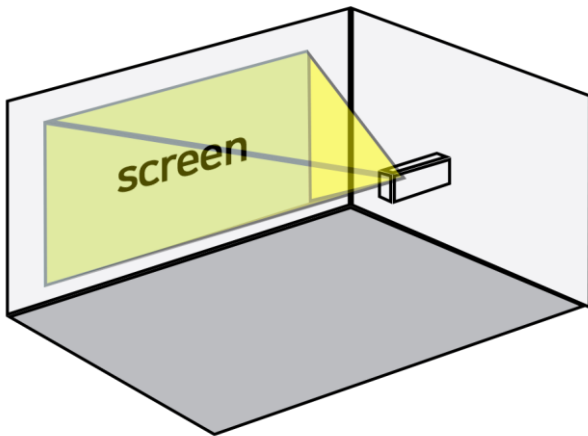

SPG construction and projector installation on the exterior glass of the store

It can be applied to various substrates, such as walls and structures made of wood or cement, etc

SPW (Screen Paint for Wall)

How to use

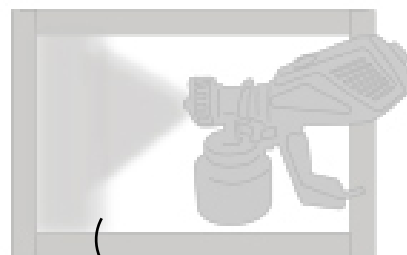

Front screen paint

This is a screen paint for walls that is a water-soluble coating agent, used as screen. It is applicable to various substrates, including walls and structures made of wood or cement. As there is no restriction of shape and size, it can be applied to any space, such as wide surface and curved surface.

- 1 Attach the masking tape according to the designed screen size

- 2 After applying paint twice and wait until the paint dries, after that remove the masking tapes

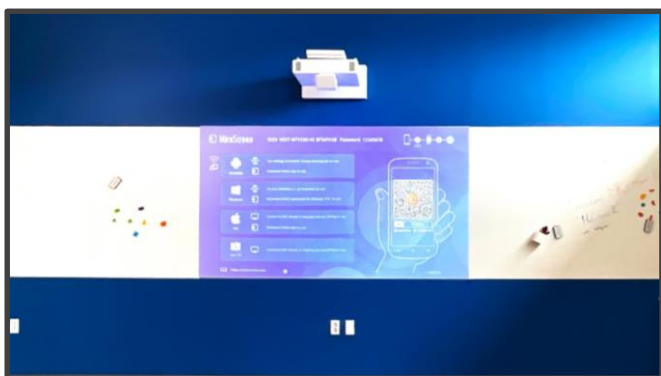

Application case

Lotte E&C Showroom

Lotte E&C Showroom installation of Curved realistic media wall, edge blending, projection warping, 3D content production

3 sided immersive media wall construction and projector installation

Hannam University

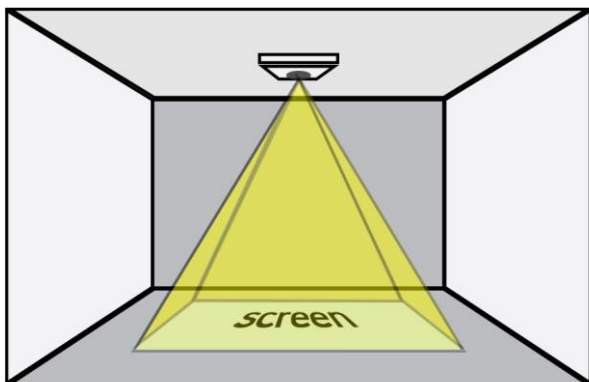

Create digital banners and projector installation

It can be applied to various substrates, such as floor surface made of wood or cement marble, etc

SPF (Screen Paint for Floor)

How to use

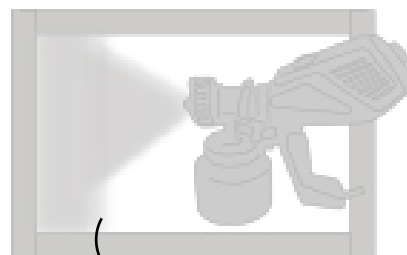

Floor screen paint

This is a screen paint for floors that is a two-component hybrid water-soluble coating agent, used as screen. It is applicable to various substrates, including floor surface and structures made of wood or cement. It has enough strength to be used on the floor, and has excellent water resistance and stain resistance.

- 1 Attach masking tape to the floor according to the designed screen size

Floor side

- 2 After applying paint twice and wait until the paint dries, after that remove the masking tapes

Application case

Busan Haeundae Aquarium
